### NUST Journal of Natural Sciences

The NUST Journal of Natural Sciences is a biennial publication of the National University of Sciences and Technology. It aims to provide a peer reviewed publication for researchers who wish to publish papers of interest to the scientific community. The journal publishes original articles in all areas of natural sciences. Initially, the journal focused on the work carried out in the South Asian region, however, now the journal is accepting articles from the global scientific community working in the field of Natural Sciences. The prime aim is to endorse rapid communication and exchange of information between the world and NUST, reflecting advances in various disciplines of scientific research. The multi-disciplinary nature of this journal is apparent in the extensive range of articles from leading scholars that are published here. The journal also introduces Pakistani academic achievements to the world community, demonstrating the significance of Pakistan's scientific achievements. Featured topics include, but not limited to virology and immunology, molecular biology and genetics, vaccinology, biochemistry, pharmacology, environmental science Genomics, and Bioinformatics, physics, chemistry, mathematics and interdisciplinary research.

Submission Abstract

In contrast to the much-studied vitamin D, the current study brought focus on the underappreciated parathyroid hormone-related peptide (PTHrP) in Postmenopausal Osteoporosis. This study explored the role of PTHrP as a biomarker for osteoporosis and its relationship to bone density, fracture risk, and overall performance. Based on 100 subjects, the study demonstrated that PTHrP levels were significantly higher in those with osteoporosis compared to those with normal bone density. The study also showed that PTHrP levels were significantly higher in those with fractures compared to those without fractures. The study demonstrated that PTHrP levels were significantly higher in those with fractures compared to those without fractures. The study also showed that PTHrP levels were significantly higher in those with fractures compared to those without fractures.

Submission Abstract

"Analytics companion" - developing the ability to support their decisions through analytic reasoning using a variety of statistical and mathematical techniques. Thomas Davenport in his book titled, "Competing on analytics: The new science of winning", claims that a significant proportion of high-performance companies have high analytical skills among their personnel. On the other hand, a recent study has also revealed that more than 59% of the organizations do not have information required for decision-making. Learning "Data Analysis" with R, not only adds to existing analytical knowledge and medical insight, but also equips with exposure into latest analytics techniques including forecasting, social media analytics, text mining & so on. It gives an opportunity to work on real time data from Twitter, Facebook & other social networking sites.

Computer scientists are using their domain domain analytic reasoning using a variety of statistical and mathematical techniques. Thomas Davenport in his book titled, "Competing on Analytics: The new bottom line of winning," claims that a winner's success in data-past data science has high-level information. On the other hand, the data science and research community (DM) of the organization to use have information. Title  
Manufacturing Factor Analysis of Likert Scale Data

Keywords  
Likert scale, factor analysis, validity, multivariate data analysis

Abstract  
Despite the academic value of factor analysis (FA) on Likert scale data, its statistical validity has been repeatedly questioned by professional statisticians. This article reviews relevant literature and proposes a statistically appropriate method of getting most out of FA on Likert scale. The review shows that a larger sample size is an important consideration in improving the appropriateness of FA on LS as it improves the solution in terms of normality, communalities and loadings. Further, a 10-point or greater scale is essential to account for normality, an alpha level of 0.01 or 0.005, and high correlation instead of Pearson's are required to improve the statistical appropriateness of the test of Likert scale. Moreover, using non-parametric alternatives like GDFCA to verify the results of FA greatly increased the overall value and validity of the test.
